

MFEM Workshop 2023

Discontinuous Galerkin in the Time Domain for Maxwell's Equations

UNIVERSIDAD
DE GRANADA

Alejandro Muñoz Manterola
Luis Manuel Díaz Angulo

What do we want to solve?

Maxwell's Equations

$$\mu \frac{\partial \mathbf{H}}{\partial t} = -\nabla \times \mathbf{E}, \quad \varepsilon \frac{\partial \mathbf{E}}{\partial t} = \nabla \times \mathbf{H} \xrightarrow{\text{IPP x2 Strong Form}} \left\{ \begin{array}{l} \hat{\mathbf{n}} \cdot (\mathbf{F}_H - \mathbf{F}_H^*) = \frac{1}{2\{\{Y\}\}} \hat{\mathbf{n}} \times (Y^+[\mathbf{E}] + \alpha \hat{\mathbf{n}} \times [\mathbf{H}]) \\ \hat{\mathbf{n}} \cdot (\mathbf{F}_E - \mathbf{F}_E^*) = -\frac{1}{2\{\{Z\}\}} \hat{\mathbf{n}} \times (Z^+[\mathbf{H}] - \alpha \hat{\mathbf{n}} \times [\mathbf{E}]) \end{array} \right. \quad \begin{array}{l} \text{Jump terms} \\ [q] = q^- - q^+ \end{array}$$

Hesthaven, J.S. and Warburton, T. (2008) Nodal Discontinuous Galerkin Methods/Algorithms, Analysis, and Applications

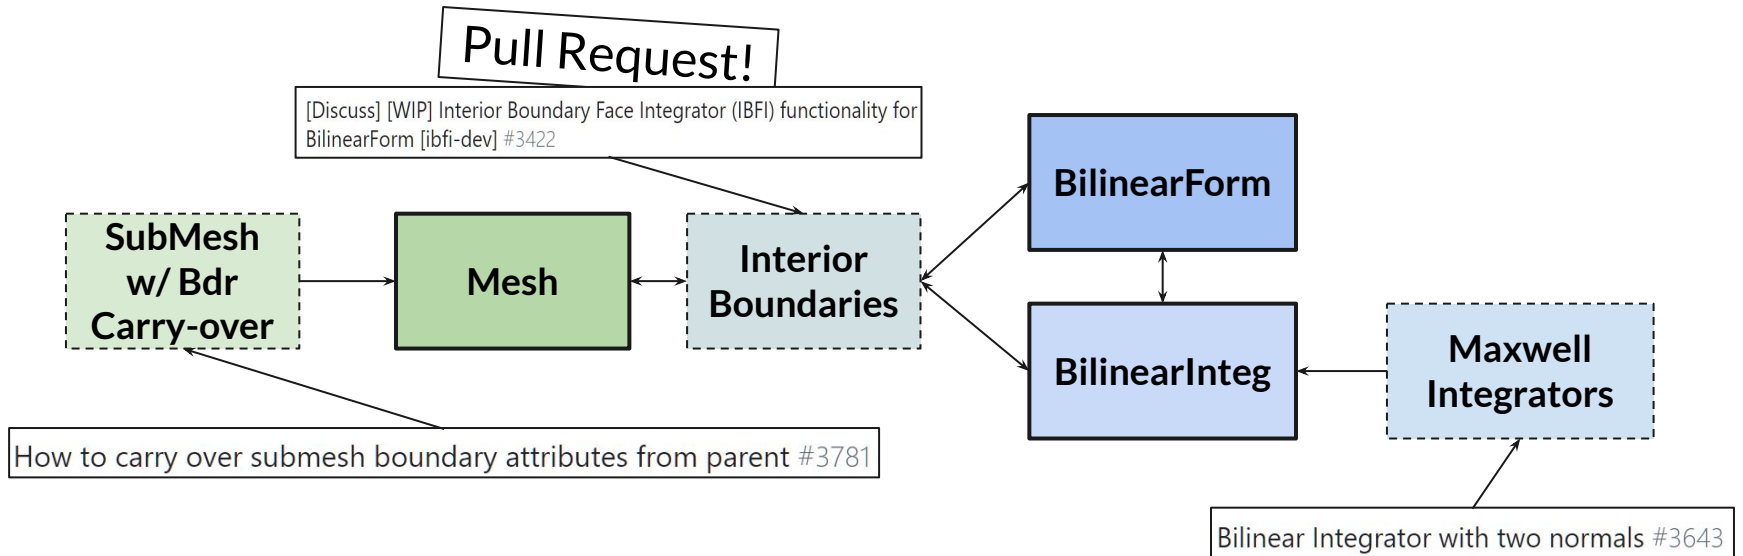

What do we need for our Multidimensional Maxwell explicit scheme solver in DGTD?

- ❑ Bilinear Integrators with customised jump terms for our Evolution TDO
- ❑ Total field & scattered field capabilities
- ❑ Designation of boundary conditions on true and interior(!) faces/edges
- ❑ Data extraction at specific faces/edges for post-processing purposes (RCS, Far-Field, ...)
- ❑ Spectral analysis for time step stability with high confidence
- ❑ And more...!

Briefly on Maxwell's Bilinear Integrators

Interacting with you! Expanding MFEM's capabilities

Prepping the simulations

* -	Type	Number	Name
	Surface	1	Vacuum
	Curve	2	SMA
	Curve	3	PEC
	Curve	301	TFSF

Thank you very much!
